
Tier 1: Primary Evidence Evaluation & Structural Clarity Check
1. Evidence Graph
Full multigraph without context pruning
Guided path scaffold steers attention
Example Input:
Row 0: Tor. Eagles (Formed 1989)
Row 1: Tor. Blues (Formed 1989)
Path: Eagles → Row 0 → Toronto → York
LLM
2. Primary LLM Call
Evaluates initial evidence along path
Strictly prohibits hallucinated guess
Ambiguity Audit:
Two candidate clubs match 1989
Bridge passage for Blues is missing
Decision: Collision → Stop & Handoff
?
3. Decision Branch
Clear: Fast Exit (1 call, ≈ 80%)
Ambiguous: Diagnostic Handoff
Diagnostic Packet Emitted:
Competing: Eagles vs Blues
Check: Verify founding year in passage
Dispatched to Tier 2 (≈ 20%)
Diagnostic Handoff: Missing Bridge Links
Tier 2: Diagnostic Feedback & Targeted Disambiguation
4. Targeted Search
Zero LLM Calls (Automated retriever)
Fetches missing facts for tied candidates
Retrieved Delta Evidence:
Fetches Doc:Toronto_Blues
Passage reveals: Blues formed in 1991
Candidate symmetry broken factually
5. State Capsule
Discards irrelevant peripheral rows
Compact bundle of verified facts
Capsule Content:
Disputed rows: Eagles vs Blues
Newly retrieved external passages
Target query check: AFL club in 1989
6. Grounded Answer
Tier 2 Call: Solves focused capsule
2 Calls Total (Bounded execution)
Auditable Resolution:
Confirmed: Eagles is the 1989 club
Bridge entity: Toronto
Final Answer: York (Provenance: 100%)
